

Aberdeen Standard SICAV I - Select Emerging Markets Bond Fund

A MInc USD

31 December 2022

Important Information

- The Fund invests in fixed interest securities issued by corporations and/or government related bodies in emerging markets.
- The Fund is therefore exposed to risks related to debt and debt-related securities, Sovereign debt, investing in sub-investment grade bonds, counterparty, emerging markets and exchange rates.
- The Fund's net derivative exposure may be up to 50% of the Fund's net asset value and subject to counterparty/credit risk, liquidity risk, valuation risk, volatility risk and over-the-counter transaction risk.
- The Fund may at its discretion pay dividends out of the capital of the Fund. Payment of dividends out of capital amounts to a return or withdrawal of part of an investor's original investment or from any capital gains attributable to that original investment. Any distributions involving payment of dividends out of the Fund's capital or payment of dividends effectively out of the Fund's capital (as the case may be) may result in an immediate reduction of the net asset value per share.
- Investment in this fund may involve a high degree of risk and may not be suitable for all investors. It is possible that the entire value of the Investment could be lost.
- Investors should not invest in this Fund based solely on this document and should read the relevant offering documents for further details including risk factors.

Objective

The Fund aims to achieve a combination of income and growth by investing in bonds (which are like loans that can pay a fixed or variable interest rate) issued by companies, governments or other bodies, in Emerging Market countries.

The Fund aims to outperform the JP Morgan EMBI Global Diversified Index (USD) benchmark (before charges).

Please note the risk analytics figures are calculated on gross returns whereas the performance figures are based on net asset value (NAV) returns. In addition, the risk analytics figures lag the performance figures by one month. It should be noted that the figures provided regarding risk would be adjusted if fund fees and expenses were included.[^] 3 and 5 year annualised. Beta is a measure of the volatility of a portfolio in comparison to a benchmark index. Fund volatility measures historical volatility. Information ratio measures the portfolio returns beyond the returns of a benchmark, usually an index, compared to the volatility of those returns. R-squared measures the percentage of a fund or security's movements that can be explained by movements in a benchmark index. Sharpe ratio measures risk-adjusted performance. Tracking error measures the divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark.

To help you understand this fund and for a full explanation of risks and the overall risk profile of this fund and the share classes within it, please refer to the Product Key Facts Statement and Prospectus which are available on our website www.abrdn.com/hk. The Prospectus also contains a glossary of key terms used in this document.

¹Yield to Maturity as at 31/12/2022 is the yield that would be realised on a bond or other debt instrument if the security was held until the maturity date.
²Distribution yield = (Gross annualised income / gross Fund NAV) – shareclass expenses attributable to income. The Distribution Yield reflects the amounts that may be expected to be distributed (where a shareclass declares a distribution) over the next twelve months as a percentage of the mid-market share price of the fund as at the date shown. Underlying yield = (Gross annualised income / gross Fund NAV) – all shareclass expenses. The Underlying Yield reflects the annualised income net of expenses and known irrecoverable withholding tax of the fund (calculated in accordance with relevant accounting standards) as a percentage of the mid-market share price of the fund as at the date shown. Both yields are based on a snapshot of the portfolio on the month-end date and are not guaranteed and actual distributions received (where a shareclass pays distribution) may be higher or lower than the amount stated. They do not include any initial charges and Investors may be subject to tax on distributions. A positive yield does not imply a positive return of the fund.

³These are the maximum charges that we might take out of your money before it is invested. In some cases, the charges may be less and you should speak to your financial advisor about this.

⁴The Ongoing Charge Figure (OCF), is the overall cost shown as a percentage of the value of the assets of the fund. It is made up of the Annual Management Charge (AMC) of 1.50% and other charges. It does not include any initial charges or the cost of buying and selling stocks for the fund. The Ongoing Charges figure can help you compare the annual operating expenses of different funds.
